## PowerPivot (2 p)

Save the **A6. Producers** and **A6. Purchases** workbooks from Moodle to your own OneDrive (or your computer's hard drive).

Using the tables from these workbooks - '**Producers**', **'Purchases'**, and **'Product Categories'** - create a data model that establishes functional connections between them.

Afterward, generate three Pivot tables from the data.

**PowerPivot 1:**

The final result shows the total purchase price as a cross-tabulation of the month and the producer's location. Add a slicer for the Product Category name. Complete the table with conditional formatting that highlights the 5 highest values.

Create a Pivot chart from the table that makes it easy to see the total purchase prices by location.

The final result might look something like this:

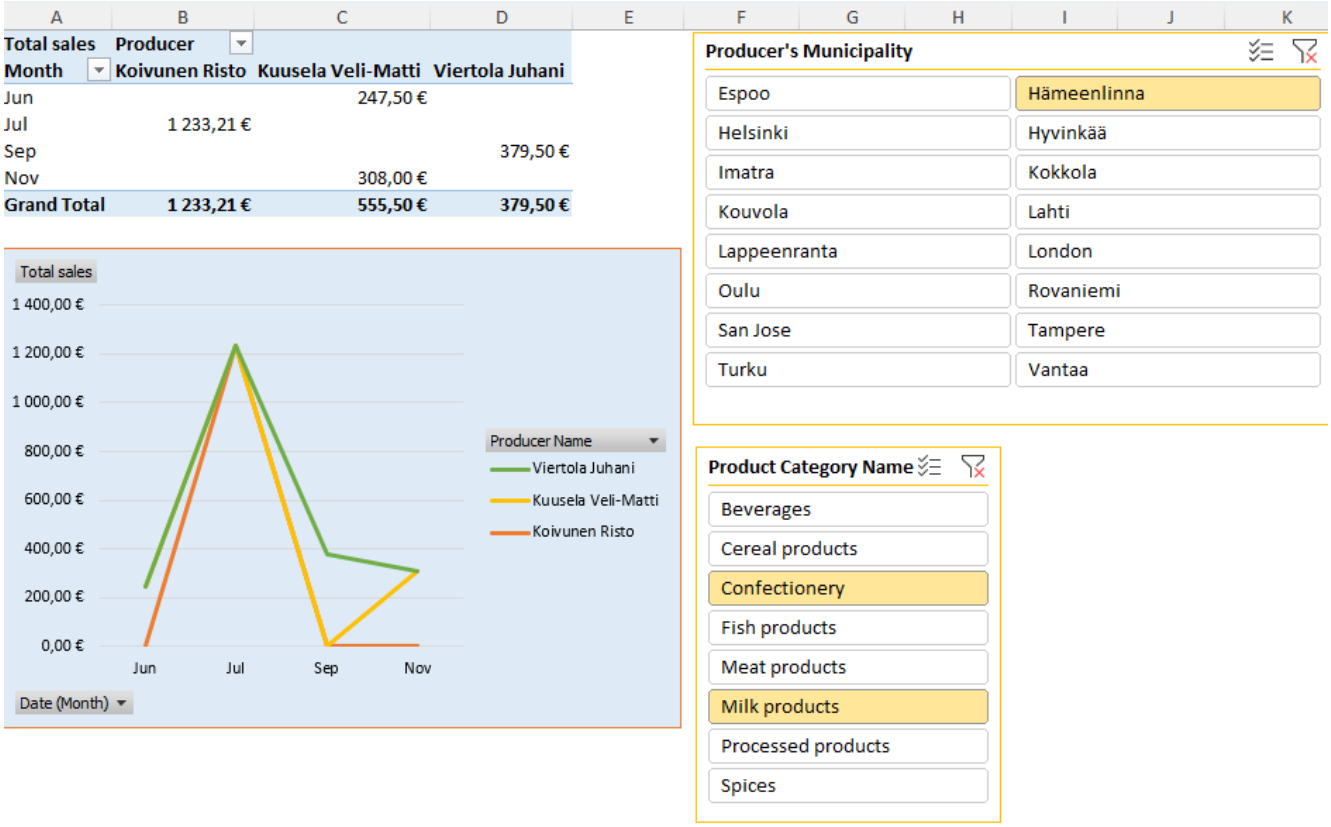
**PowerPivot 3:**

The final result displays the total purchase price by producer. Add slicers for Producer's City and Product Category Name to enable easy filtering. Create a Pivot chart to show the trend of purchases over time.

Consider if a different structure might illustrate this information more effectively. Feel free to present an alternative if it offers a clearer view.

The final result might look like this (Note: Filtered view):



| Total sales | Producer | | |
|---|---|---|---|
| Month | Koivunen Risto | Kuusela Veli-Matti | Viertola Juhani |
| Jun | | 247,50 € | |
| Jul | 1 233,21 € | | |
| Sep | | | 379,50 € |
| Nov | | 308,00 € | |
| **Grand Total** | **1 233,21 €** | **555,50 €** | **379,50 €** |
